Tool, Equipment and Materials Management

Stop the Tool Loss!

Your organization depends on accurate information on tools, equipment and materials. By knowing the locations of every tool and who is accountable, management can take control of escalating tool costs. In addition to achieving dramatic reductions in tool loss, employee and contractor productivity is increased by having tools, equipment and materials where and when you need them.

PowerTrack Tool Management utilizes a SQL server database to maintain your tool, equipment and materials information. Transactions such as tool check-out, check-in and transfers may be performed on a PC or mobile device such as an Android or iPhone. Tool lookups, history functions and comprehensive reports provide management with information on current inventory and tool activity.

Tracks Movements and Assignments

During the check out process, tools, and materials are assigned to sites, employees, or contractors quickly and easily through the use of bar code

scanning. A site is selected and optionally an employee/contractor ID can be scanned or their name selected from a list. Each tool is scanned and an optional return date can be recorded. The bottom line is that all tool, equipment and materials movements are recorded to enforce employee/contractor accountability and accurate inventory.

Visibility to Tools and Materials

Whether in the office or in the field, it is important to know the location and availability of tools and materials. The lookup capability in PowerTrack Tool Management is the most comprehensive in the industry. A user can quickly search for an

individual tool or model number—or filter results based on category, description, manufacturer, sites, assignment (employee/contractor), business unit/department, and condition.

Analysis of Tool/Material Usage and Activity

Tool and material usage can be analyzed by a quick look up of transaction history or through activity reports. Transaction history can be filtered by date range, tool or model number, site, assignment (employee/contractor), business unit/department and by transaction type (e.g., check-in, check-out, transfer, receipt, new/retired asset). Activity reports point management to areas of heavy tool

Benefits

- Reduce loss, theft and neglect by making employees and contractors more accountable
- Have tools, equipment and materials where you need them to improve productivity
- Visibility of tool and equipment inventory at job sites and in the warehouse
- Extensive reporting for effective management of your tool operation

utilization or tools that are rarely used, thus guiding future tool purchases.

Rugged Mobile Devices with Integrated Scanning

Transactions (check-in, check-out, and transfer) can be supported in the field using rugged mobile devices with high-performance integrated barcode scanning. Mobile devices can operate in connected or disconnected mode. Transactions made while disconnected are transmitted to the server when a network connection is re-established. Wireless LAN and Wide Area Connectivity are supported.

Check Out Tool on Android

Type: Check Out Tool

Assignment: Lester Smith

Tool No: 1009

Desc.: Drill, 3/8"

Condition: Good

Site: Tuscon OfficePlex

Apr 27, 2015

Auto-Post

Notes

Post

Features

- Tool and materials catalog with model information and manufacturer
- Fast and easy set up of new tools and materials
- Support for barcode scanning
- User-defined tool categories and condition codes
- User-defined sites with optional sub locations
- Assignment to employees and contractors
- Transfers to and from job sites and stocking locations
- Business unit and department support
- Look up of tools and materials with comprehensive search and filtering
- Transaction look up with comprehensive search and filtering
- Tracking of maintenance dates
- Tool and materials inventory and activity reports
- Handheld support in connected or disconnected mode
- Inventory cycle count feature
- Role and site based permissions

About POSDATA

POSDATA Group is a Pacific Northwest company specializing in barcoding and asset tracking technologies, and the developer of the PowerTrack mobility platform. Visit powertrackmobile.com to see how companies like yours are lowering costs and improving accuracy.
